DETAILED ACTION

Claim Objections

1. Claims 43-48 are objected to because of the following informalities. Appropriate correction is required.

In claim 43, line 4, the phrase "the torsional oscillation" should be changed to – a torsional oscillation --.

In claim 44, line 2, the phrase "a tip" should be changed to – the tip --.

In claim 46, line 2, the phrase "the centerline" should be changed to – a centerline --. In line 2, the phrase "the other side" should be changed to – an other side

In claim 47, line 2, the phrase "the inertial force" should be changed to – the inertial forces – to provide proper antecedent basis.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 42-47 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent 7,089,787 (Sahin et al.).

Art Unit: 2856

Sahin et al. discloses a torsional cantilever atomic force microscopy comprising, as illustrated in Figures 1-11, a probe 100 having a tip 106; a drive (not numbered, but as observed in Figure 1) to oscillate the probe into torsion wherein the probe is microfabricated so that a torsional oscillation of the probe is effectively excited based on inertial forces caused by at least one structural design characteristic of the probe. (See, column 4, line 30 to column 5, line 8).

With regards to claims 43-47, Sahin et al. further discloses the probe has a longitudinal axis 104 such that the probe is asymmetric about the axis by positioning the tip of the probe not on the longitudinal axis or the shape of the cantilever is asymmetry or more mass is on one side of a centerline and the height of the tip is selected to increase the inertial force of the probe when driven into torsional oscillation. (See, column 6, line 38 to column 8, line 50).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 48 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 7,089,787 (Sahin et al.).

Page 4

With regards to claim 48, Sabin et al. does not specify such parameter (i.e. the height is greater than 15 microns) as in the claim. However, to have set such test characteristics as in the claim is considered to have been a matter of design choice that would have been obvious to an artisan of ordinary skill in the art at the time of invention without departing from the scope of the invention.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The references cited are related to probes having a tip on a cantilever excited by a torsional oscillation.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Helen C. Kwok whose telephone number is (571) 272-2197. The examiner can normally be reached on 8:30 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hezron E. Williams can be reached on (571) 272-2208. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
